

WATER SPECIALIST FOR THE POWER SECTOR

Flootech offers a wide range of technologies, process solutions and services for the power sector with over 40 years' experience from water management.

The gained experience over past decades and developed competence from operation and manufacturing of water systems, combined with our engineering skills guarantee utmost performance and quality for our solutions and services for;

Raw Water Treatment

Boiler Feed / Demineralized Water Preparation

Condensate Polishing

Plant Operation Assistance and Optimization

Water Plant Maintenance and Service

Our solutions are based on proprietary technologies developed through excellence in engineering and operational insight as well as in close cooperation with our customers and partners.

Flooclari™ Clarifiers

Floodaf™ Microflotation

Floosand™ Sand filtration

Floouf™ Ultrafiltration

Floolx™ Ion Exchanger

Floocarb™ Active Carbon Filter

Floosoft™ Softener

Flooro™ Reverse Osmosis

Floochem™ Chemical Handling

Flooro™ Reverse Osmosis and CO2 degasifier

Floomb™ Mixed Bed Ion Exchanger

FlooSoft™ Softener

FlooX™ Ion Exchangers

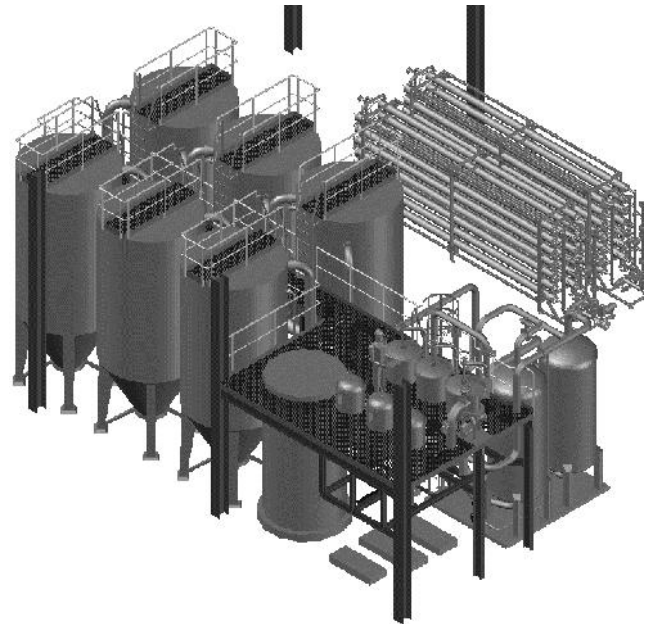

Scope of work

Our typical scope in projects for the power sector comprise engineering, manufacturing, automation, instrumentation, installation, and commissioning for the supplied system.

We also provide maintenance service and spare parts to ensure trouble-free operation throughout the lifecycle of the system.

Main Benefits of Flootech Demineralized Water Treatment Plant

- Fulfilling demanding water quality requirements
- High reliance and stable outgoing water quality
- Low maintenance cost and stand-alone operability
- Compact and efficient design
- Lifecycle aspect considered in design, dimensioning and maintenance
- Integrated design for lowest fresh water usage and waste water discharge
- Fast-track project execution, trouble free guarantee period and operation

FlooSand™ Sand Filters, Cartridge Filters and FlooRO™ Reverse Osmosis
